

Why India uses voice everywhere except ChatGPT mobile

A PM case study: market research → user research → **Voice Draft Mode** — speak, review, then send.

01 The story in one minute

Executive summary

M1 · Market
Landscape & UX

M2 · Research
Survey & interviews

M2 · Frame
Problem canvas

M3 · Build
Voice Draft Mode

Indians already trust voice on **WhatsApp** and **Google**. On ChatGPT mobile, the gap is not “find the mic” — it is **control**: the transcript can commit before they read and fix it.

Focus segment

Working professionals in India on ChatGPT mobile — daily use, high-stakes prompts, subscription upside.

Solution

Voice Draft Mode — speech stays in an editable draft until the user taps Send.

70%

Typing feels safer than voice

50%

Want check-and-fix before send

80%

Use voice on WhatsApp

Directional sample: n=10 working professionals (16 survey total). North star: voice prompt completion (mic → Send).

02 Market research

Milestone 1 — India voice landscape

Mobile-first India already uses voice for search, assistants, and WhatsApp notes. ChatGPT competes with **Gemini Live** on conversational feel — but long *prompts* need a different UX than short commands.

Product	Voice pattern
WhatsApp	Record → listen → send or re-record
Gemini Live	Interrupt and correct mid-stream
Google Assistant	Short commands
ChatGPT mobile	Mic → transcript → feels immediate

Segments explored: vernacular-first · tier-2/3 mobile · WhatsApp natives · students · **metro professionals** → **Milestone 2 deep dive**

03 User research

Milestone 2 — slides 1 & 2

SLIDE 1 · SEGMENT CHOICE

Working professionals (ChatGPT mobile, India)

Segment	Why not lead
Students / job seekers / creators	Lower WTP or spiky use
Regional-language-first	Needs ASR investment
Professionals ✓	Daily use · work stakes · Plus fit

SLIDE 2 · QUANT + QUAL INSIGHTS

Survey n=16 (10 in segment) · 3 follow-up interviews · hypotheses: control ✓ · discoverability X

- **Commit anxiety** — “role” vs “roll” before the model answers
- **WhatsApp model** — listen before send; ChatGPT feels send-first
- **Gemini** — interrupt mid-sentence; composer feels one-shot

[Milestone 2 deck PDF](#)

04 Problem framing

Milestone 2 — slide 3 · canvas

SLIDE 3 · PROBLEM FRAMING CANVAS

Field	Answer
Barrier	Cannot verify/fix transcript before it becomes the prompt
Problem	Voice underused not because hidden — because first transcript is not trusted
Competitive refs	WhatsApp review · Gemini interrupt
Direction	Voice Draft Mode
Leading metric	Draft-to-send rate (mic → Send after edit)

Insight: Voice loses to typing because typing lets you edit **while** you compose. ChatGPT mobile needs an equivalent pause.

05 Solution & prioritisation

Milestone 3 — Voice Draft Mode

✓ Build

Voice Draft Mode — editable draft, explicit Send

Later

Auto-organize / STAR guide

Out (2 wk)

Recognition / Hinglish rebuild

User flow

1

Mic visible in composer

2

Speak → stop

3

Draft box (not sent)

4

Tap word to edit

5

User taps Send

6

Model responds

Metric	Role
Voice prompt completion	North star
Edit rate on drafts	Proves review
7-day repeat voice	Habit

LinkedIn-ready takeaway

Fix trust before you fix the mic. **Voice Draft Mode** gives India's power users the same pause WhatsApp already taught them.
