

Slide 1 — Chosen segment

Working professionals in India (ChatGPT mobile)

Segment	Why not lead
Students	Lower WTP; mixed language hurts first trust
Job seekers	Spiky use; voice nice-to-have
Content creators	Smaller mobile DAU share
Regional-language-first	Needs ASR investment
Working professionals ✓	Daily use, work stakes, subscription fit

Highest impact: High-stakes prompts; if voice is safe, repeat use and session length move for a high-LTV cohort.

Slide 2 — Research insights

Survey n=16 (10 in segment) · 3 follow-up interviews · Target 30+ for production validation

70%

Typing safer

50%

Check-and-fix helps

80%

Voice on WhatsApp

Blockers

- Transcript feels committed before review
- Keyboard = edit while composing; voice = gamble
- WhatsApp: listen before send; Gemini: interrupt — ChatGPT feels one-shot
- Open office → type; mic discoverability not the main issue

Slide 3 — Problem Framing Canvas

Field	Answer
User	Working professional, ChatGPT mobile, commute / between meetings
Current behaviour	Types important prompts; tried voice, reverted
Desired behaviour	Speak long prompts when hands busy — if as safe as typing
Barrier	Cannot verify/fix transcript before it becomes the prompt
Problem statement	Voice underused because users cannot trust the first transcript for work prompts
Direction	Voice Draft Mode — editable draft until explicit Send
